

In re Application of Young et al.  
Application No. 09/599,156

**LISTING OF CLAIMS**

1. (currently amended): In a computer network, a method for installing software onto a remote client machine, comprising:
  - initiating a connection at a server to the client machine;
  - transmitting an installation service that installs software, the installation service transmitted from the server to the client machine based on the connection initiated by the server; and
  - executing the installation service on the client machine, the executing independent of any installation program previously installed on the client machine, the executing further comprising:
    - running a bootstrap service to connect the client machine to a second server; and
    - transmitting additional software from the second server for installing on the client machine.
2. (original): The method of claim 1 wherein initiating a connection to the client machine includes discovering the client machine.
3. (previously presented): The method of claim 2 further comprising, evaluating a discovery information associated with the client machine.

In re Application of Young et al.  
Application No. 09/599,156

4. (original): The method of claim 3 wherein the discovery information associated with the client machine is evaluated against a set of rules.

5. (previously presented): The method of claim 3 wherein evaluating the discovery information associated with the client machine includes determining whether the client machine is included or excluded with respect to a set that includes machines on which the installation service is installed.

6. (previously presented): The method of claim 3 wherein evaluating the discovery information associated with the client machine includes checking the operating system of the machine.

7. (previously presented): The method of claim 3 wherein evaluating the discovery information associated with the client machine includes checking at least one property of the machine.

8. (previously presented): The method of claim 3 wherein evaluating the discovery information associated with the client machine includes determining whether certain software is already installed on the machine.

In re Application of Young et al.  
Application No. 09/599,156

9. (original): The method of claim 1 wherein initiating a connection to the client machine includes creating a configuration request for the client machine.

10. (original): The method of claim 9 wherein initiating a connection to the client machine includes processing the configuration request.

11. (original): The method of claim 9 further comprising queuing the configuration request.

12. (original): The method of claim 11 wherein initiating a connection to the client machine includes dequeuing and processing the configuration request.

13. (cancelled):

14. (original): The method of claim 13 further comprising, installing optional components on the client machine by executing the additional software.

15. (original): A computer-readable medium having computer-executable instructions for performing the method of claim 1.

In re Application of Young et al.  
Application No. 09/599,156

16. (currently amended): In a computer network, a system for selectively installing management software onto remote client machines, comprising:

a data manager for evaluating information associated with a plurality of discovered remote client machines, and for selecting one of the remote client machines as a selected client machine;

a configuration manager for initiating a connection to the selected client machine; and

an installation service transmitted by the configuration manager to the selected client machine, the installation service installing at least part of the management software on the selected client machine, the installing independent of any installation program previously installed on the client machine, wherein the installation service may be operable to execute a bootstrap service to connect the client machine to a second server and to coordinate transmission of additional software from the second server for installing on the client machine.

17. (previously presented): The system of claim 16 wherein the data manager selects the client machine by evaluating a discovery information associated with the client machine against criteria.

18. (original): The system of claim 17 wherein at least part of the discovery information associated with the client machine is maintained in a data discovery record.

In re Application of Young et al.  
Application No. 09/599,156

19. (original): The system of claim 16 wherein the data manager produces a configuration request for the selected client machine, and wherein the configuration manager receives the configuration request.

20. (original): The system of claim 19 wherein the configuration request comprises a client configuration record.

21. (original): The system of claim 19 wherein the configuration request is placed in a queue by the data manager and removed from the queue by the configuration manager.

22. (original): The system of claim 21 further comprising a retry queue.

23. (cancelled):

24. (original): The system of claim 23 wherein the additional management software is downloaded from a client access point.

25. (original): The system of claim 23 wherein the bootstrap service is configured to connect the client machine to another server.

In re Application of Young et al.  
Application No. 09/599,156

26. (original): The system of claim 25 wherein the other server transmits additional software for installing on the client machine, and wherein the additional software installs optional components on the client machine.

27. (currently amended): In a computer network, a method for installing management software onto a remote client machine, comprising:

attempting to initiate a connection at a server to the client machine, and if successful:

transmitting an installation service from the server to the client machine, and executing the installation service, the executing independent of any installation program previously installed on the client machine;

and if not successful:

secondarily attempting to initiate a connection at the server to the client machine, and if successful, transmitting an installation service from the server to the machine, and executing the installation service, the executing independent of any installation program previously installed on the client machine,

wherein the installation service comprises a bootstrap service, such that executing the installation service includes running the bootstrap service to connect the client machine to another server, and transmitting additional software from the other server for installing on the client machine.

In re Application of Young et al.  
Application No. 09/599,156

28. (previously presented): The method of claim 27 further comprising, evaluating a discovery information associated with the client machine.

29. (original): The method of claim 27 wherein attempting to initiate a connection to the client machine includes, associating a configuration request with the client machine.

30. (original): The method of claim 29 wherein attempting to initiate a connection to the client machine includes queuing the configuration request, dequeuing the configuration request, and processing the configuration request.

31. (original): The method of claim 30 wherein the attempt to initiate a connection to the client machine is unsuccessful, and further comprising, secondarily queuing the configuration request.

32. (original): The method of claim 31 wherein secondarily attempting to initiate a connection to the client machine includes dequeuing the secondarily queued configuration request.

33. (previously presented): The method of claim 29 further comprising, modifying the configuration request by writing data thereto indicative of the installation service executing on the client machine.

In re Application of Young et al.  
Application No. 09/599,156

34. (original): The method of claim 33 further comprising, queuing the configuration request having the data written thereto.

35. (original): The method of claim 34 further comprising, dequeuing the configuration request having the data written thereto, determining if the installation service executed successfully, and if not, reattempting execution of the installation service.

36. (original): The method of claim 35 wherein reattempting execution of the installation service includes removing the data written to the configuration request.

37. (original): The method of claim 36 further comprising queueing the configuration request having the data removed therefrom.

38. (cancelled):

39. (previously presented): The method of claim 27 further comprising, installing optional components on the client machine by executing the additional software.

In re Application of Young et al.  
Application No. 09/599,156

40. (previously presented): The method of claim 27 wherein secondarily attempting to initiate the connection includes delaying for a period of time.

41. (previously presented): A computer-readable medium having computer-executable instructions for performing the method of claim 27.

42. (currently amended): A method for installing software onto a client machine, comprising:

determining whether a user that is logged onto the client machine has sufficient security rights to have software installed on the client machine, and if so:

executing a process at the client machine to install the software;

and if not:

initiating a connection at a server to the client machine, transmitting an installation service from the server to the client machine based on the connection, and executing the installation service to install the software wherein the installation service comprises a bootstrap service, such that executing the installation service includes running the bootstrap service to connect the client machine to another server, and transmitting additional software from the other server for installing on the client machine, the

In re Application of Young et al.  
Application No. 09/599,156

executing the installation service independent of any installation program  
previously installed on the client machine.

43. (previously presented): The method of claim 42 further comprising,  
evaluating a discovery information associated with the client machine.

44. (previously presented): The method of claim 42 wherein initiating a  
connection to the client machine includes associating a configuration request  
with the client machine.

45. (previously presented): The method of claim 44 wherein initiating a  
connection to the client machine includes, queuing the configuration request,  
dequeuing the configuration request, and processing the configuration request.

46. (previously presented): The method of claim 44 further comprising,  
modifying the configuration request by writing data thereto indicative of the  
installation service executing on the client machine.

47. (previously presented): The method of claim 46 further comprising,  
queuing the configuration request having the data written thereto.

In re Application of Young et al.  
Application No. 09/599,156

48. (previously presented): The method of claim 47 further comprising, dequeuing the configuration request having the data written thereto, determining if the installation service executed successfully, and if not, reattempting execution of the installation service.

49. (cancelled):

50. (previously presented): The method of claim 49 further comprising, installing optional components on the client machine by executing the additional software.

51. (previously presented): A computer-readable medium having computer-executable instructions for performing the method of claim 42.
